Safety and Health Policy

At Ensham Resources we believe that all work related injuries and diseases are preventable. Excellence in safety and health performance is a core value and is integral to the management of our business.

Ensham is committed to safe production. If any activity carries an unacceptable level of risk, the activity does not proceed until the risk is reduced to an acceptable level. We do not expose anyone to risks which we would find unacceptable for our partners, sons, daughters or any loved ones.

We are committed to improving our safety culture and standards in all the activities we undertake.

We make no distinction between direct employees of Ensham Resources and our contractors.

Our Safety and Health Objectives

- Maintain and protect the well being of everyone working for and on behalf of Ensham.
- Achieve safety and health performance of which our employees and their families can be proud.
- Manage safety and health to a standard that meets legislative and business requirements.

To achieve our objectives we will:

- Comply with safety and health legislation through the application of robust risk management processes;
- Engage our employees in the implementation of safety and health strategies;
- Improve operational effectiveness through continual refinement of our Safety and Health Management System;
- Promote a culture in which all employees and suppliers to our business demonstrate a commitment to safety and health;
- Make employees, contractors and visitors aware of this policy and our Safety and Health Systems as applicable to them; and
- Regularly review this policy and communicate it to all stakeholders.
